

The Scale Rule

The scale for most theater drawings is $\frac{1}{2}'' = 1'-0''$ though $\frac{1}{4}''$ and $\frac{3}{8}''$ inch scale are also used.

$\frac{1}{2}$ inch scale is preferred by most because it is small enough to allow placement of many scenic units on a manageable size sheet of paper, yet large enough to specify most detail.

However, our Ground Plan is in $\frac{1}{4}$ scale.
